

EBH18A - BUSH REPLACEMENT TOOL

kit for heavy road vehicles

For powerful and versatile performance

The EBH18A universal hydraulic bushing replacement tool kit is used for a wide variety of applications on truck and bus workshops worldwide. It will fit brands like Scania, Volvo, MAN, Mercedes, Renault, Iveco and DAF. Working with EBH18A to replace bushings, axles and bearings is easy and saves time. Once you have become familiar with the system and how to use it, you will find it very easy to adapt it to many other applications where performing difficult operations in less time is important. A 50% or more time saving is not unusual!

EBH18A does the job on the spot

In many cases the amount of strip-down preparation is reduced and the need to take the part to a workshop press eliminated. Instead you can work with the universal hydraulic tool kit directly on the vehicle.

Free hands for higher precision

When the kit is assembled for a particular task it can be set in position with high precision by means of the air/hydraulic foot pump, which leaves you with two hands free at all times.

No damage to the vehicle parts

The traditional way of working using a slide-hammer or other lumbering tools can damage vehicle parts. This is in most cases avoided by using the EBH18A kit.

Environmentally friendly and appreciated

Now when heating and hammering can be avoided, both service technicians and customers will appreciate the EBH18A HGV bushing tool kit. The technician will be spared the noisy, potentially dangerous and physically straining working methods to replace bushings and can in a more up-to-date, ergonomically correct way and with less noise carry out his daily work. The vehicle owner will appreciate the low stand-still time which is otherwise time consuming and will allow vehicles to be returned to the customer in less time.

The EBH18A kit can easily be equipped for different types of jobs

The available standard EBH18A kit will have a suitable fit for most applications. However, in some cases you need to adjust the tube adapter or bush removers to be able to carry out the job perfectly. In many cases these accessories are already available as standard.

TECHNICAL DATA

Accessories

EB18-DAF

EB18-DAF accessory kit is intended to be used on DAF trucks with compressible bushings. It consists of one adapter sleeve, one press plate and one protector plate.

ETS18

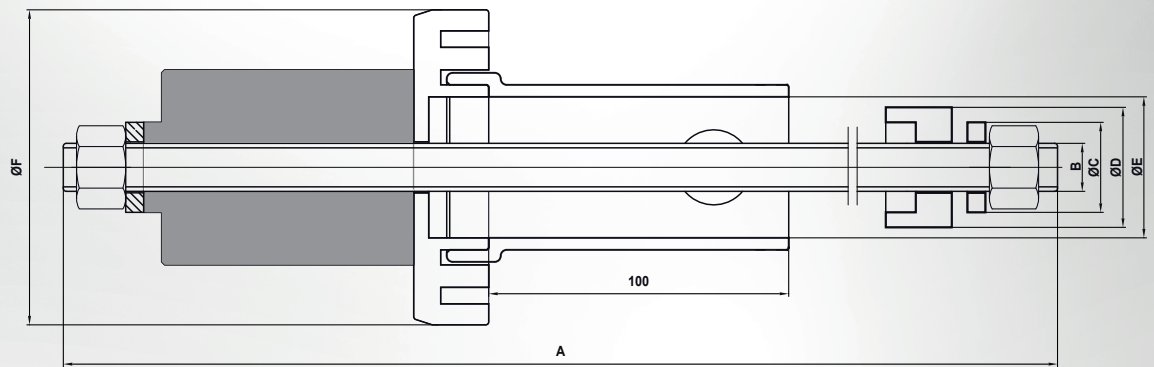

The ETS18 accessory kit is intended to be used for compressible bushings and consist 5 different tapered support sleeves and 3 press plates. It fits Iveco, MAN and Mercedes commercial vehicles. Parts can be sold separately.
